

# ALVEUS

MIX ... MATCH ...  
and make your kitchen sink a shiny magic that works for you.

## ALVEUS

The Alveus brand products are designed for modern high-end kitchens. In today's interiors, the boundaries between the kitchen and living area are becoming blurred, while minimalist, refined and sophisticated design solutions have begun to gain ground.

The carefully designed solutions will enhance your food preparation and kitchen work efficiency. Alveus sinks are manufactured from top-quality modern materials, which ensures easy and environment-friendly maintenance and decomposition.

With their large, clean surfaces and innovative approach to space use, Alveus sinks perfectly match the latest furniture and architectural ideas. They are made for kitchens just like that, as their outstanding design and functional qualities exceed the existing standards in many ways.

## Premium Stainless Steel

The main characteristics and advantages of 18/10 stainless steel are:

- easy cleaning which ensures a high level of hygiene
- resistance to high temperatures and rapid temperature changes (thermal shock)
- break resistance
- resistance to chemical influences
- 100 % recyclability

## Special surface treatment of stainless steel

A thin vaporized metal substance known as ceramic nitride is carefully deposited onto stainless steel surface, resulting in:

- unique metal lustre,
- superior scratch resistance,
- extremely hard-wearing protective surface.

The surface-treated stainless steel is available in four precious metal colour shades - GOLD, BRONZE, COPPER and ANTHRACITE. Due to the nature of surface treatment process, each sink ends up with unique colour shade.

**Flat mount sink** are installed into kitchen worktop so that a uniform working surface is created. Thin, almost unnoticeable rims allow quick and easy cleaning. An additional advantage is simple installation from above into each type of kitchen worktop.

**Undermount sinks** are installed into kitchen worktop from below. Worktop must be made of waterproof material, such as natural stone and composite material. This type of installation enables various combinations of undermount bowls in different sizes. Absence of seams between sink and worktop contributes to simple hygiene maintenance and overall appeal of a kitchen.

**Inset sinks** are installed into kitchen worktop, thus forming part of continuous working surface. Sink is inserted from above into a suitable worktop cut-out and fastened with supplied clamps.

**Flush mount sinks** are installed into previously adjusted kitchen worktop made of waterproof material (natural stone, composite material, glass, impregnated solid wood). Surface of the sink and surface of the worktop are in the same level. The main advantage is seamless working surface that enables very easy cleaning and an attractive appearance.
