

PC INOX	Stainless steel sinks maintenance Vzdrževanje nerjavnih pomivalnih korit	Koda	QM
		Datum	14.5.2015
		Št.dok.	011

### **ENG version**

Problem description:

After a certain period of use, the surface of stainless steel sink might alter its appearance. Changes are especially evident in the case of irregular and improper maintenance of the product. On the surface it may appear lime-stone and dirt.

Example:

### **Cleaning process and rehabilitating of the surface:**

The surface of the product should be slightly moisten. Sprinkle cleaning detergent in the powder and let some time to react.

Take a soft cloth or sponge and polish product at all times in the same direction. It means in direction of the ribs.

When the surface is cleaned spread surface with polishing paste for stainless steel materials. Polishing in the same direction until reach a high-gloss and uniform appearance of the surface.

Coat the surface with Alveus Allshine cleaning agent.

Periodically repeat the procedure when it is necessary.

### **SLO verzija**

Po določenem času uporabe lahko površina nerjavečega pomivalnika spremeni svoj zglad. Spremembe so še posebej izražene v primeru nerednega in nepravilnega vzdrževanja izdelka. Na površini se lahko pojavijo ostanki vodnega kamna in umazanije.

### **Postopek čiščenja in sanacija površine:**

Površino izdelka na rahlo navlažimo. Posujemo čistilni prašek v prahu in pustimo nekaj časa, da reagira.

Vzemi mehko krpo ali spužvo in poliraj izdelek ves čas v isto smer to je v smeri reber.

Ko je površina očiščena premaži površino s polirno pasto za nerjavne materiale.

Poliranje v isti smeri izvajaj, do visokega sijaja in enotnega izgleda površine.

Površino premaži z preparatom za vzdrževanje in čiščenje pomivalnih korit Allshine.

Postopek periodično ponavljaj po potrebi.
